Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eyraier (5,722,685) in view of Larsen, et al. (5,957,493).

Eyraier discloses an airbag apparatus comprising an airbag having an occupant-side-surface facing the occupant and a vehicle-body-side surface opposite to the occupant-side surface when the airbag is inflated, and an upper chamber 28 and a lower chamber 26 separated from each other; a gas generator 12; and a communicating portion between the upper and lower chambers. Eyraier teaches the occupant-side-surface and the vehicle-body-side surface are joined at peripheries thereof. Eyraier teaches a gas distributor formed of a sheet wrapping around the gas generator. As shown in figures 2 and 3, the gas distributor is formed of the sheet rolled in a cylindrical shape with edges overlapped and the gas generator is fixed with a mounting member passing through the edges. A bent unit 30 is formed in the upper chamber.

Eyraier teaches the claimed invention except for a check valve. Larsen teaches an airbag comprising a check valve 44. Based on the teachings of Larsen, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have a check valve to control the flow of inflation gas during the deployment of the airbag.

Allowable Subject Matter

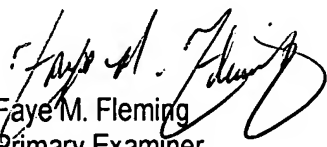

3. Claims 8-13 are allowed.
